SPINNING REEL

FUKURU NEW

The **Nautilus Fukuru** reel is a new generation of ultralight spinning reels designed for Ultra Light rods. Weighing just 135 g, it balances ultralight spinning rods well and is suited to delicate lures and fine rigs.

The body and rotor are made from strong, lightweight carbon. The super-shallow 1000SS spool is designed for fine line and braid, especially important in ultralight fishing. The screw-in handle provides a tight connection, while the serviceable handle knob runs on two bearings.

The anodised aluminium shaft helps the mechanism start easily, a bearing in the rotor nut reduces friction, and rubber seals on the drag and rotor nuts protect the components from moisture and dust.

Nautilus Fukuru is ideal for mormyshing and other finesse techniques. It combines minimal weight, functional features and an affordable price, allowing you to build a light, practical ultralight outfit.

TECHNICAL SPECIFICATIONS

Size	Bearings	Gear ratio	Line capacity mm/m
1000SS	7+1	5.2:1	0.102/140 0.121/120 0.141/100

SPINNING REEL

GAMORA NEW

The **Nautilus Gamora** reel is a new addition to the popular Gamora rod series, designed for finesse lure fishing with Light and UL-Light rods.

The range comes in sizes 2000 and 2000S, optimised for fine braid and fishing line. The reels feature a screw-in handle and a line roller bearing, and weigh just 145 g. This low weight comfortably balances light and ultralight rods, bringing the model close in weight to modern top-end reels.

Like all **Gamora** tackle, these reels follow a concept of maximum affordability: modern materials, sought-after design features and the specifications needed for effective light tackle fishing, without excessive cost.

TECHNICAL SPECIFICATIONS

Size	Bearings	Gear ratio	Line capacity mm/m	Line capacity PE/m
2000	5+1	5.2:1	0.161/160 0.181/140 0.205/110	0.8/150
2000S	5+1	5.2:1	0.102/190 0.121/170 0.141/150	0.4/150

SPINNING REEL

TWIN FORCE NEW

The **Nautilus Twin Force** reel is a new generation of the legendary powerful reel, developed to meet the demands of modern jig fishing. It is designed for large lures, heavy rigs and high loads, where winding power, mechanism stability and tackle control are especially important.

The rigid metal body protects the mechanism from deformation, increases reel life and improves tackle sensitivity. X-Ship provides smooth rotation and stable gear operation under load, while Worm Shaft ensures tight, even braid lay, essential for long casts.

The low 4.3:1 gear ratio gives the reel real winding power: it confidently handles bulky lures, deep-water jig fishing and demanding fish fights. The lightweight Air Rotor reduces rotor inertia, while two slider guide rods improve mechanism stability under sustained loads.

The screw-in handle eliminates play, while the serviceable handle knob with a bearing provides smoother, more comfortable rotation. **Twin Force 4000PG New** is a reliable choice for heavy jig fishing and demanding lure fishing.

TECHNICAL SPECIFICATIONS

Size	Bearings	Gear ratio	Line capacity PE/m	Line capacity mm/m
4000PG	9+1	4.3:1	1.5/170	0.247/130 0.285/110.305/90

SPINNING REEL

INVENT NEW

The **Nautilus Invent** reel is a new generation of Nautilus spinning reels for the 2027 season. The updated series retains its affordable price while adding features to improve winding power, reliability and braid lay.

The 4.6:1 gear ratio delivers dependable winding power for various lure fishing techniques, including heavy jig fishing. The Slow Oscillation System produces even braid lay and helps increase casting distance.

The handle screws directly into the drive gear, minimising play and ensuring quiet, smooth operation. A switchless Antireverse system improves the reliability of the one-way clutch, including when fishing in winter conditions.

The model is available in four popular sizes.

TECHNICAL SPECIFICATIONS

Size	Bearings	Gear ratio	Line capacity mm/m
1000	5+1	4.6:1	0.17/130 0.19/110 0.24/90
2000	5+1	4.6:1	0.17/150 0.19/130 0.24/105
2500	5+1	4.6:1	0.19/150 0.24/130 0.28/115
3000	5+1	4.6:1	0.19/200 0.24/160 0.28/145

FEEDER REEL

RESOLUTION FEEDER METHOD

NEW

The Nautilus Resolution Feeder Method 6500S LD reel is a new, larger size and a specialist model in the Resolution feeder reel range. Developed around the Long Distance concept, it is intended for Method feeder fishing, powerful feeder rods, heavy rigs and playing large fish.

Key differences from the standard models in the series are a larger mechanism, an elongated Long Cast spool for maximum casting distance and a slow spool oscillation system. This produces even, parallel braid or line lay, reduces friction against the spool lip and helps increase casting distance.

The reel features a full X-Ship system, an additional handle knob bearing, a lightweight perforated spool and fast-acting Quick Drag. The low 4.4:1 gear ratio provides high winding power when using heavy feeders and playing large fish.

Two clips provide precise distance control: a metal clip with a plastic backing to reduce the risk of braid damage, and a rubber clip designed for the finest braid and line.

TECHNICAL SPECIFICATIONS

Size	Bearings	Gear ratio	Line capacity mm/m
6500S LD	7+1	4.4:1	0.255/250 0.285/200 0.300/160

FEEDER REEL

AVIOR FEEDER

NEW

The Nautilus Avior Feeder reel is a new generation of the legendary Nautilus Avior New feeder reels, developed with the requests and wishes of both recreational anglers and professional match anglers in mind.

The reels retain their outstanding technical qualities, reliable metal body and powerful X-Ship system with a screw-in handle, while receiving several important improvements. Chief among these are a lightweight, compact Air Rotor for easy start-up and exceptional tackle sensitivity, and an additional bearing on the intermediate gear, bringing the total bearing count to 7+1.

The feeder range comprises two specialist shallow-spool models: the extra-powerful 4000S with a low 4.3:1 gear ratio for comfortable use with heavy feeders, and the versatile, powerful 6000S with a 4.9:1 ratio for long casts and fast retrieval. Both versions deliver excellent winding power, flawless braid lay and a high level of comfort during intensive fishing.

TECHNICAL SPECIFICATIONS

Size	Bearings	Gear ratio	Line capacity mm/m
4000S	7+1	4.3:1	0.205/130 0.221/115 0.247/100
6000S	7+1	4.9:1	0.221/180 0.247/150 0.285/120

FEEDER REEL

CROSSBLADE
FEEDER NEW

Nautilus Crossblade Feeder reels are a modern feeder reel series available in sizes 5000S, 6000 and 6000S. The range lets you match the reel precisely to the rod class, fishing distance and line or braid diameter.

The 6+1-bearing mechanism delivers smooth, quiet and stable operation. The larger-diameter spool helps achieve longer casts, while its optimised line capacity accommodates common line and braid diameters without backing.

The spool has a large, line-safe clip with a plastic backing, allowing reliable distance setting without the risk of line damage. The protective rotor skirt prevents line or braid from getting under the spool. The CNC-machined metal screw-in handle minimises play and improves overall rigidity.

TECHNICAL SPECIFICATIONS

Size	Bearings	Gear ratio	Line capacity mm/m
5000S	7+1	4.9:1	0.225/180 0.255/150 0.300/100
6000	7+1	4.9:1	0.305/240 0.330/200 0.356/170
6000S	7+1	4.9:1	0.255/180 0.285/150 0.300/130

FEEDER REEL

FAITH
FEEDER NEW

Nautilus Faith Feeder reels: in 2027, the popular range will be expanded with specialist feeder models. The series will include three sizes - 5000, 5000S and 6000S - to suit different fishing conditions, distances and line or braid diameters.

Key differences between the feeder Faith reels and the spinning versions are a larger body and mechanism, a powerful 4.7:1 gear ratio, a larger-diameter spool and a large, line-safe clip with a plastic backing. This design better meets the demands of fast-paced feeder fishing, using feeders and frequent recasting.

The models will feature an individual design while retaining the Faith series' main advantage: a successful combination of good performance and an affordable price.

TECHNICAL SPECIFICATIONS

Size	Bearings	Gear ratio	Line capacity mm/m
5000	3+1	4.7:1	0.305/200 0.330/160 0.356/130
5000s	3+1	4.7:1	0.255/170 0.285/150 0.305/120
6000S	3+1	4.7:1	0.255/180 0.285/150 0.305/130

FEEDER REEL

MARK FEEDER NEW

Sizes: 4500, 5000, 5000S

FEEDER REEL

MARK FEEDER NEW

Sizes: 6000, 6000S

Nautilus Mark Feeder reels are a new addition to the Nautilus Mark range. Five feeder models will be introduced in 2027, developed around the characteristics and demands of modern feeder fishing.

The Mark Feeder range combines reliability, smooth and quiet operation, long service life and an affordable price. While all are designed for feeder fishing, the reels differ in specifications and design features, allowing you to choose the best model for particular conditions, fishing distances and rigs.

All Nautilus Mark Feeder models feature a low 4.6:1 gear ratio, delivering the winding power needed to retrieve heavy feeders and fish at distance. The enlarged, line-safe clip with a plastic backing secures the fishing distance while reducing the risk of braid damage. A bearing in the handle knob provides light, smooth and stable rotation.

TECHNICAL SPECIFICATIONS

Size	Bearings	Gear ratio	Line capacity mm/m
4500	6+1	4.6:1	0.221/180 0.247/170 0.285/150
5000	6+1	4.6:1	0.305/200 0.330/160 0.356/130
5000S	6+1	4.6:1	0.255/180 0.285/150 0.305/130
6000	6+1	4.6:1	0.305/270 0.330/230 0.356/200
6000S	6+1	4.6:1	0.255/200 0.285/170 0.305/150

CARP REEL

INVENT PRO NEW

The **Nautilus Invent Pro** reel is a new generation of flagship Nautilus carp reels, combining modern technology, low weight, high rigidity and reliability. A carbon body and rotor reduce the weight to 500 g without sacrificing strength.

Worm Shaft combined with Super Slow Oscillation produces tight, even line lay for long, accurate casts. Quick Drag allows rapid adjustment of drag pressure when playing fish. The screw-in handle eliminates play, and a handle knob bearing ensures smooth, comfortable operation. Two spool clips allow two fishing distances to be used at the same time.

The specially coated duralumin main shaft is designed to handle high loads and reduce friction. The 10+1-bearing mechanism is smooth and durable, while a service port in the body simplifies maintenance and lubrication.

Reinforced electroplating and carbon components allow the reel to be used for sea and surf fishing, provided it is rinsed with fresh water after contact with salt water. The box contains soft padding for safe transport and delivery.

TECHNICAL SPECIFICATIONS

Size	Bearings	Gear ratio	Line capacity mm/m
8000	10+1	4.4:1	0.26/260 0.28/250 0.30/200
10000	10+1	4.4:1	0.30/470 0.35/340 0.40/260

CARP REEL

CORNET NEW

Nautilus Cornet reels are new carp reels for 2027, available in sizes 8000 and 10000. The series combines an affordable price with the features needed for confident long-range fishing.

The reels feature 6+1 high-quality bearings and a worm shaft mechanism. Combined with slow spool oscillation, this design produces even, tight line lay, especially important for consistent long-distance casting.

The rotor has a special protective skirt that prevents line from getting under the spool. The 4.8:1 gear ratio balances the speed needed to retrieve rigs from long range with the required winding power.

The fast Quick Drag system lets you quickly loosen the drag after casting and placing the rod on a rod pod, making it easy to prepare the tackle for a bite.

TECHNICAL SPECIFICATIONS

Size	Bearings	Gear ratio	Line capacity mm/m
8000	6+1	4.8:1	0.28/250
10000	6+1	4.8:1	0.40/300

SPINNING ROD

BLACK GETTER NEW

JIG EDITION / JIG FISHING

Nautilus Black Getter spinning rod: in 2027, we introduce a new generation of the iconic Black Getter jig fishing rod range.

The series was created as an affordable rod for everyday anglers seeking performance and feel close to the upper price segment at a reasonable cost. The rods feature high-modulus 40-ton carbon blanks, lightweight guides with thin LS inserts and a reliable reel seat with a rear locking nut.

Black Getter combines low weight, high rigidity and good sensitivity, meeting modern demands for jig rods. Most models have a pronounced Ex-Fast action, providing precise lure control and clear bite feedback.

- **842H** - an all-round jig rod for river fishing from a boat or the bank.
 - **822HH** - a powerful rod for heavy weights and large lures.
 - **802M** - the lightest model, with a responsive tip for monitoring bottom contact. An excellent choice for jig fishing for zander and pike on lakes and reservoirs.
- **802H** - a powerful boat spinning rod for jig fishing in current, with a stiff blank and reinforced butt section for a positive hook-set.
 - **792MH** - a more powerful version of the 802M, with a higher casting weight and excellent tactile and visual sensitivity. Works in both current and still water.
 - **762MH** - an all-round boat rod: suitable for jig fishing, various lures and twitching 90-130 mm plugs.
 - **762XH** - a specialist model for light pelagic jig fishing.

KEY TECHNOLOGIES

- **40T carbon**
light weight, rigidity and sensitivity.
- **Ex-Fast action**
fast response and lure control.
- **LS guides**
light weight, balance and feedback.

SPINNING ROD

GAMBIT NEW

Nautilus NAUTILUS GAMBIT spinning rods are a highly affordable series combining modern design principles, quality materials, manufacturing technology and premium styling. The series' main feature is performance previously rarely seen in this price segment.

Despite its affordable price, **GAMBIT** offers all the key qualities of a complete spinning outfit: high sensitivity, low weight, ergonomics, good balance, quality assembly and reliable fittings. The carefully tuned fast-action blanks provide accurate casting, confident retrieve control, effective hook-sets and assured fish playing.

The versatile **GAMBIT** range is suited to a wide range of bank and boat fishing tasks. The rods confidently handle jig lures, spoons and spinners, plugs and leader rigs, allowing successful fishing for most common predatory species.

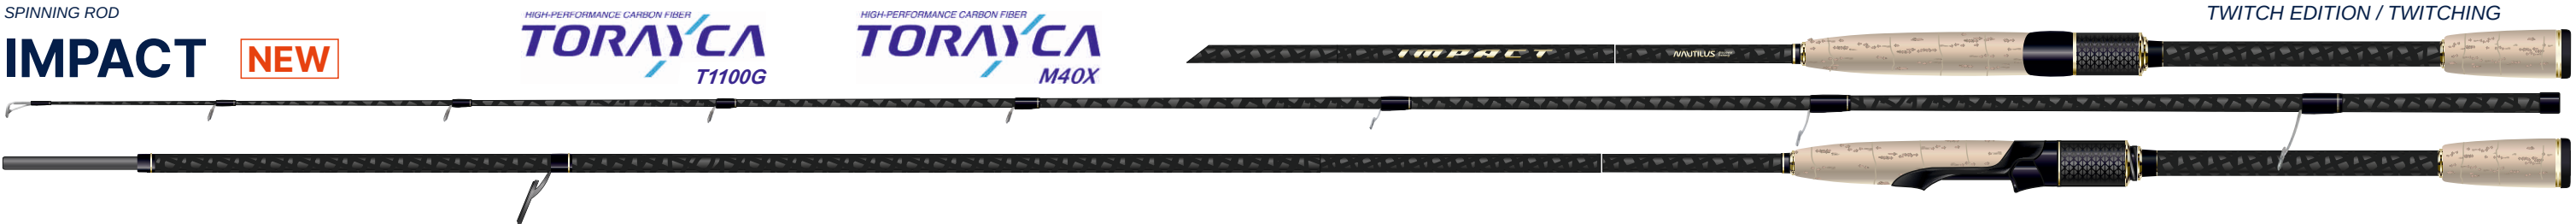

KEY TECHNOLOGIES

- **Materials and assembly**
low weight, reliability and a neat finish
- **Fast action**
sensitivity, lure control and positive hook-sets
- Versatility for different lures, rigs and fishing conditions

Nautilus **IMPACT** is a series of state-of-the-art Nautilus spinning rods developed for a specific task: working plugs that require a jerking retrieve - twitching in all its forms.

Nautilus **IMPACT** delivers maximum lure control and takes plug presentation to a new level - from smaller models to 160 mm big minnows and high-resistance deep divers.

This is an ideal rod for working lures, with performance previously unattainable at this price: a pronounced bass-style action and carefully considered ergonomics, ultra-light guides with thin Slim SiC inserts in titanium frames, excellent Portuguese cork and the new flagship **NVSS (FBCS)** carbon reel seat. Central to the design is a combination of top-grade materials and technologies: **Torayca M40X** graphite (Toray's most advanced, strong, high-modulus material) and **T1100G** (the material with the world's highest tensile strength today). For the first time, these graphite grades are available in this price segment and have been used in the specialist IMPACT twitching series.

The result: every **IMPACT** model is powerful, with strength in reserve, yet very light and exceptionally sensitive. These rods cast long distances and allow comfortable lure action even at maximum casting range.

The carefully chosen casting weights of the six-rod range let you select tackle for your fishing conditions and lures. The series comes in casting and spinning versions, with a modern design and the flawless finish and quality of a truly top-level model.

KEY TECHNOLOGIES

- **Torayca M40X and T1100G graphites**
High-modulus M40X and high-tensile-strength T1100G.
- **Slim SiC guides in titanium frames**
Lightweight fittings with thin inserts - minimum weight, maximum feedback.
- **NVSS (FBCS) reel seat**
Flagship reel seat and natural AAA Portuguese cork

SPINNING ROD

INQUISITOR NEW

Nautilus INQUISITOR spinning rods are an affordable series designed for twitching and working plugs with a jerking action. A pronounced bass-style action, fast blank response and ample power reserves allow confident use of compact minnows, medium jerkbaits and high-resistance deep divers.

Three models with carefully selected casting weights help you choose a rod for specific fishing conditions and lures. The blanks combine light weight, sensitivity and strength for precise retrieve control and confidence when playing fish.

The rods feature lightweight anti-tangle guides with SiC inserts, a split grip made from quality cork and an ergonomic VSS reel seat. The carefully designed handle geometry and balance keep the tackle comfortable during an active day's fishing.

The result is an ideal rod for working plugs, with performance previously unattainable at this price.

KEY TECHNOLOGIES

- **Fast bass-style action**
plug control and power in reserve
- **SiC Anti-Tangle guides**
minimal tangles and free braid flow
- **Twitching ergonomics**
a comfortable grip, balance and comfort when twitching

Nautilus Della spinning rods are a new Nautilus jig rod series for 2027, created to meet high standards of sensitivity, reliability and performance. The blanks use Japanese **Torayca T1100G** and **M40X** carbons reinforced with carbon tape. Lightweight **Webo** guides with **ZL** inserts and a carbon reel seat help keep weight to a minimum and feedback high. The series is designed for jig fishing and rigs with a separate weight - paternoster, Texas and Carolina rigs. Carefully selected lengths and casting weights let you choose a model for the bank or boat.

- **762LL** - a model between UL and L for finesse perch fishing with light lures. In addition to jig fishing, it works well with 35-70 mm minnow plugs and suits fish of varying activity levels.
- **802L** - a 2.40 m all-round light jig rod for bank and boat fishing. Suited to a classic jig retrieve and working lures with a jerking action.

- **832L / 862L** - bank fishing models for long, comfortable casts. Provide confident retrieve control at distance and effective hook-sets on predators, including zander.
- **802ML** - an all-round spinning rod for bank and boat fishing, designed for medium jig fishing. Highly sensitive in the hand and suited to zander and pike.

KEY TECHNOLOGIES

- **Torayca T1100G and M40X**
Japanese carbons for sensitivity and reliability
- **Carbon reinforcement**
increases blank strength
- **Lightweight fittings**
Webo ZL guides and a carbon reel seat

MAINER COMPETITION

NEW

HIGH-PERFORMANCE CARBON FIBER
TORAYCA
T1100G

HIGH-PERFORMANCE CARBON FIBER
TORAYCA
M40X

MICRO JIG SPECIAL / MICRO JIG FISHING

Nautilus Mainer Competition spinning rods are a Nautilus micro jig and Rock Fish series for the 2027 season. The range includes four models in different lengths and casting weights. The blanks use Japanese **TORAYCA T1100G** and **M40X** graphites, combining light weight, high sensitivity and power in reserve. All models feature a stiff Hard Solid carbon tip and a pronounced Ex-Fast action with a powerful butt section. The rods provide precise control of light rigs, allow active lure presentation and confident control when playing fish.

- **622XUL** - the most delicate model in the series for short-range fishing and working ultralight lures. Ideal for active night fishing under piers, bridges and jetties.
- **682UL** - a stiff, responsive rod for aggressive lure action and confident fishing at medium range.
- **702UL** and **722UL** - all-round micro jig models in the most popular lengths and casting weights. Suitable for saltwater and freshwater fishing; main targets include perch, croaker, horse mackerel, scorpionfish and other predators.

KEY TECHNOLOGIES

- **TORAYCA T1100G + M40X**
a lightweight, sensitive and powerful blank
- **Hard Solid Tip**
a stiff carbon tip for bite detection

SPINNING ROD

IMPULSE

NEW

Nautilus Impulse spinning rods are new for 2027: a series of 10 models for XUL-L fishing. The rods cover lure weights from around 1 g to rigs weighing 10 g, with the main focus on micro jig and light jig fishing.

Impulse rods are among the lightest in their price segment: even the most powerful model weighs just 80 g. The blanks still have the necessary power reserves, while their fast action ensures comfortable use of light jig rigs, precise lure action and confident retrieve control.

Low weight and high tactile sensitivity help you read the bottom contours, monitor bottom contact and react promptly to cautious bites. The Carbon Hard Solid tip combines visual and tactile feedback while retaining the ability to set the hook reliably at any fishing distance.

The series is suitable for micro jig fishing, light jig fishing, leader rigs and rigs with separate weights, small plugs and metal lures. Impulse can also be used for saltwater shore rockfishing, including horse mackerel fishing with soft plastics.

KEY TECHNOLOGIES

- **Lightweight fast-action blank**
low weight, high sensitivity and precise lure action
- **Carbon Hard Solid tip**
visual and tactile feedback, positive hook-sets
- **Modern manufacturing technology**
minimal weight combined with power in reserve

SPINNING ROD

GOLDFINGER NEW

Nautilus Goldfinger spinning rods are a new UL-L range for 2027, comprising nine models of different lengths and casting weights. The rods are designed for chub, asp, perch and trout with a variety of lures in different conditions. Ultra-light, sensitive, fast-action blanks made from high-modulus 40T carbon provide accurate casting and comfortable plug and spoon/spinner action. They confidently handle fine braid and line, effectively cushioning fish surges during the fight. The ergonomic AAA-grade cork handle underlines the series' classic stream-fishing concept. The reel seat locking nut has plastic inner pads that secure the reel without damaging its foot. The rods feature lightweight DKK AT guides. The range includes both classic two-piece models and a compact Travel version for trips and travel.

- 642 - the lightest model in the series, for micro lures, streams and small rivers. Designed for finesse fishing for chub, grayling and trout, accurate casts and comfortable playing of smaller fish.
- 672 and 692 - classics for wading on small rivers. Accurately present SSR and SR plugs beneath bushes and trees when targeting predatory cyprinids.
- **702 TW** - a specialist rod for twitching light minnow plugs, with the action and casting weight needed for confident lure presentation.
- 732 and 742 - versatile models for wading and bank fishing on medium and large rivers. Handle a broad range of lures, including MR and DR plugs.
- 762 - a rod for asp and large chub on larger waters, suitable for bank fishing and fishing while drifting.
- 802 - the longest and most powerful model in the series, for long casts with blade baits, spinners, metal jigs and DR/DDR plugs
- 734 - a compact Travel model in an impact-resistant EVA case for convenient transport.

KEY TECHNOLOGIES

- **40T carbon**
A light, sensitive blank for confident lure control and use of fine rigs
- **Fast action**
Accurate casts, comfortable plug and spoon/spinner action, cushioning fish surges
- **Lightweight DKK fittings**
AT guides and an AAA cork handle preserve the balance and stream-fishing concept of the series

SPINNING ROD

SINERGIA NEW

STREAM SPECIAL / FISHING IN CURRENT

Nautilus Sinergia spinning rods are a balanced series of three high-class models with a strong stream-fishing focus, at a highly affordable price within their segment. Sinergia meets the strictest demands of the modern lure angler. The design reflects both established traditions and newer trends in this type of fishing.

The series is intended for fishing in current: targeting the predatory cyprinids of our rivers (chub, ide and asp), as well as other predators, including trout. Classic stream fishing with all lure types within the casting weight range: plugs, spoons and spinners, metal jigs, blade baits and others.

All models share the concept of multi-purpose rods for fishing in current: comfortable casting, sufficient blank resilience and lure control in the flow, along with effective performance when playing fish. **Sinergia** also works well on still waters.

The rods are built on light, reliable blanks and fitted with lightweight guides whose minimal weight helps realise the rod's full potential.

KEY TECHNOLOGIES

- **Light, resilient blank** control and confident fish playing
- **Stream-fishing versatility** for current and different lures

TECHNICAL SPECIFICATIONS

SPINNING ROD

TROUT SPECIAL / TROUT FISHING

TROUT SPIRIT NEW

Nautilus Trout Spirit spinning rods are the flagship Nautilus series for stocked trout fishing. The range comprises three models of different lengths and powers, allowing you to choose a rod for specific lures, fishing conditions and fish sizes.

- 632 - a delicate model for miniature lures and the finest braids.
- 662 - an all-round spinning rod for recreational and competitive area trout fishing.
- 692 - a more powerful model for large trout, fast fish playing just after stocking, fishing around aerators and long-distance spoon casting.

The blanks are made from high-modulus 40T carbon and fitted with lightweight DKK AT guides and AAA-grade Portuguese cork handles. Each model has its own colour and design. The Moderate-Fast action ensures comfortable lure handling, precise retrieve control and reliable fish playing with fine braid and line.

KEY TECHNOLOGIES

- 40T carbon blank lightness, sensitivity and power
- AAA-grade Portuguese cork natural, high quality

SPINNING ROD

VIOLENTO

NEW

TROUT SPECIAL / TROUT FISHING

Nautilus Violento spinning rods are new for 2027. The series is designed for finesse trout fishing with light and ultralight lures and offers a highly affordable price within its segment.

Violento will appeal to a wide range of anglers who enjoy competitive and recreational trout fishing on commercial fisheries.

The range covers the full spectrum of trout hardbaits: plugs and spoons, including relatively heavy, long-casting area trout spoons, as well as other lure types.

Violento will also suit chub anglers, those targeting predatory cyprinids and, of course, ultralight enthusiasts using any lure type within the stated casting weight range.

Nautilus Violento delivers good sensitivity, ergonomics, comfortable retrieve control and confident fish playing. The modern, harmonious design reflects the traditions and new trends established in this type of fishing.

KEY TECHNOLOGIES

- **Trout specialisation** for light and ultralight lures
- **Control** sensitivity, ergonomics and comfort when playing fish

SPINNING ROD

MORM COMPETITION STYLE / MORMYSHING

TELEMORM NEW

Nautilus **TELEMORM** spinning rods are a high-tech series for mormyshing, combining performance previously unavailable in the 'morm' class with an optimum balance of quality, functionality and price.

The telescopic construction provides maximum transport convenience: the rod can be carried with the reel fitted and the rig ready, then extended in seconds before fishing, without retying the rig.

The blanks use **Toray** materials and modern manufacturing technologies for high sensitivity. They transmit cautious fish contacts, the action of light lures and subtle details of the retrieve. Carefully designed geometry and action allow accurate, long casts with ultralight weights, lure control in the wind and confident control when playing fish.

The series is designed for mormyshing and nano jig fishing, and is suitable for both non-predatory and predatory fish: perch, crucian carp, chub, trout, bleak, rudd and pike.

The range includes three models with different blank actions, from familiar Regular to pronounced Extra Fast. All retain the series' key advantages, allowing you to select a rod for your fishing conditions and preferred technique.

The rigid plastic case reliably protects the blank and guides during transport, including when carrying the rod fully rigged.

KEY TECHNOLOGIES

- **Telescopic construction**
transport fully rigged and ready to fish in seconds
- **Toray materials**
high sensitivity and light lure control
- **Blank geometry and action**
accurate casting, performance in wind and control when playing fish

TECHNICAL SPECIFICATIONS

SPINNING ROD

MORM SPECIAL / MORMYSHING

FUKURU TELE NEW

The **Nautilus Fukuru Tele** spinning rod is new for the 2027 season and a logical continuation of the Fukuru spinning rod range. Its telescopic construction provides exceptional compactness: a 1.57 m rod with a packed length of just 37 cm.

The blank action is designed for mormyshing retrieves and confident use of the lightest lures. The seven-section construction retains a full ergonomic EVA handle and a reliable **Fuji** reel seat without increasing the packed dimensions.

The removable rear section simplifies maintenance: an individual section can be replaced if damaged. The rod comes in a rigid case that protects it during storage and transport and allows it to be carried fully assembled, with the reel and rig fitted.

Like other Fukuru models, **Fukuru Tele** has its own colour scheme and is designed for specific fishing conditions. It is a practical choice for holidays, trips, cycling, hiking and keeping permanently in the car.

KEY TECHNOLOGIES

- **Seven-section telescopic construction**
1.57 m with a packed length of 37 cm
- **EVA handle and Fuji reel seat**
full ergonomics in a compact format

TECHNICAL SPECIFICATIONS

Model	Length, m	Cast wt., g	Action	Packed length, m	Sections
NFM-574XUL	1.57	0.1-1	Mod-Fast	0.37	7

SPINNING ROD

CROSSBLADE TELE

NEW

JIG SPECIAL / JIG FISHING

Nautilus Crossblade Tele spinning rods are new telescopic travel rods in the Crossblade range. Their six-section construction provides compact packed dimensions and convenience when travelling.

The rods have a pronounced fast action for accurate lure presentation, good retrieve control and confident hook-sets. They come with a protective cover to reduce the risk of damage during transport, plus a carrying bag for convenient storage and transport.

Nautilus Crossblade CBS-702ML 214 cm 7-21 g - a versatile travel model, ideal for both jig fishing and twitching plugs. Its length and fast action allow it to handle a very broad selection of 90-130 mm plugs, as well as light spoons and spinners.

Nautilus Crossblade CBS-762H 228 cm 10-39 g - a strong, powerful model suited to river jig fishing and saltwater fishing for large fish. It pairs well with large, heavy spoons, spinners and plugs when fishing on rafting and hiking trips along northern and Siberian rivers.

KEY TECHNOLOGIES

- Compact travel format: the six-section telescopic construction fits easily into luggage while retaining the rigidity and action of a jointed rod.

TECHNICAL SPECIFICATIONS

Model	Length, m	Cast wt., g	Action	Line, lb	Packed length, m	Sections
CBS-702ML	2.14	7-21	Fast	6-16	0.74	6
CBS-762H	2.28	10-40	Fast	10-22	0.74	6

FEEDER ROD

IMPULSE FEEDER NEW

Nautilus **IMPULSE Feeder** rods are a range of versatile feeder rods built around the Travel concept. The 3.60 m models come in the most popular casting weights and combine functionality, modern design and an affordable price.

A compact packed length of just 80 cm makes it easy to fit the rod in a car or suitcase and take it on holiday, a business trip or any journey.

The carefully tuned blank action suits both still water and current. Power in reserve provides confident long-distance casting, while the rod's proper response under load helps control fish effectively during the fight.

IMPULSE Feeder is a practical choice for anglers who want a full-featured feeder rod always at hand, without transport restrictions.

FEEDER SPECIAL / FEEDER FISHING

KEY TECHNOLOGIES

- Travel concept**
a compact packed length of just 80 cm for convenient transport in a car, luggage or suitcase.

TECHNICAL SPECIFICATIONS

FEEDER ROD

FEEDER SPECIAL / FEEDER FISHING

MUSSON FEEDER NEW

Nautilus Musson Feeder rods are a modern Nautilus feeder rod range, developed as an affordable, light and reliable option for different fishing conditions. The series replaces Nautilus Digger, retaining its recognisable design while clearly improving on its predecessor in weight, response and sensitivity: the blanks are lighter, faster and more informative.

The rods were developed with leading match anglers and feature solutions typical of more expensive competition series. As a result, **Musson Feeder** offers a strong balance of price, quality and performance.

The range includes light rods rated up to 70 g for still waters and gentle current, as well as powerful models up to 180 g for long casts, heavy feeders and river fishing. The light, easy-casting blanks are made from 100% carbon, and each rod comes with three interchangeable quivertips of different ratings - Light, Medium and Heavy - made from carbon and fibreglass. The first three lower guides have reinforced anti-tangle frames to help reduce braid tangles when casting. A practical EVA handle, a convenient bag and the availability of original replacement quivertips make the series easy to use both on the water and in everyday handling.

Musson Feeder rods are straightforward, effective feeder rods for anglers who value modern performance, versatility and a truly affordable price.

KEY TECHNOLOGIES

- **Updated 100% carbon blank**
lighter, faster and more sensitive: the main functional change in the series
- **Competition geometry and action**
features developed with match anglers improve casting dynamics, rig control and bite feedback
- **Reinforced anti-tangle lower guides**
a practical solution for consistent, comfortable casting, especially with braid

BOTTOM FISHING ROD

BOTTOM FISHING

MAGGER FEEDER NEW

Nautilus Magger New rods are a new generation of Nautilus Magger bottom fishing rods for 2027. The popular series has received several important updates, making it even more versatile and appealing to anglers.

The range has expanded with new lengths and casting weights developed in response to anglers' requests. It is now easy to choose a model for anything from small roach and rudd to specimen wild carp and catfish.

The blanks are also more advanced: the butt section uses 24T carbon, while the upper section combines 24T and 30T carbon. This increases tackle sensitivity, makes the action faster and improves comfort when casting and playing fish.

The new bright design makes **Magger** easy to see on the ground, in grass and after dark, helping to avoid accidental rod damage.

KEY TECHNOLOGIES

- Expanded model range**
defines the series' versatility and allows a rod to be selected for different conditions, distances, rig weights and fish sizes
- Updated carbon blank construction**
the key technical improvement: the combination of 24T and 30T carbon affects sensitivity, action, casting distance and comfort, and the rod's performance when playing fish
- Bright, practical design**
does not directly affect performance, but helps protect the tackle: the rod is easier to see on the bank and at night, reducing the risk of accidental damage

CARP ROD

CARP SPECIAL / CARP FISHING

BLACK ROCK CARP NEW

Nautilus Black Rock Carp rods are a Nautilus carp rod series created at the request of competitive anglers for long casts and confident playing of large fish.

The powerful, stiff blanks have ample strength in reserve and feature lightweight KW anti-tangle guides. A 50 mm butt guide with a SiC insert allows line to flow freely and braided lines to be used effectively. The classic handle and reel seat layout, with an optimised length, is designed for powerful long-distance casting.

The series comes in two- and three-piece versions, in 12 and 13 ft lengths, with 3.5 lb and 3.75 lb test curves. The rods suit traditional and competitive carp fishing, heavy PVA sticks and bags, snag fishing with strong braid and taking rigs out to extreme distances.

Their rigidity and power also make **Black Rock Carp** rods effective in current, including conditions on the Volga and Akhtuba where heavy rigs are used. Each model comes with a convenient transport bag.

KEY TECHNOLOGIES

- Powerful, stiff blank**
the foundation of the rod: delivers distance, handles heavy rigs, controls large fish and fishes in current
- 50 mm KW guides with SiC inserts**
a key element for long casts and safe use of braided lines without frequent tangles
- Extended classic handle**
provides correct power-casting mechanics and comfortable rod control when playing fish

TROLLING ROD

MOTIVATOR NEW

TROLLING GAME / TROLLING

The **Nautilus Motivator** rod is a new addition to the Nautilus range of high-class specialist trolling rods.

The powerful yet light and elegant carbon blanks offer high reliability and a carefully tuned action for controlling large fish during the fight, while the tip allows highly precise monitoring of a plug's action on the retrieve.

The use of high-quality carbons of different moduli gives **Motivator** high sensitivity, transmitting subtle lure behaviour, bottom contacts and cautious bites. It also allows the lure to be worked without the blank collapsing, even under the load of a large, deep-running plug.

The ergonomic extended EVA handle provides a comfortable grip when holding the rod while fishing and is compatible with all types of boat rod holders. The model has modern styling; the range comprises three rods for multiplier reels in the most popular casting weights.

KEY TECHNOLOGIES

- Blank made from carbons of different moduli combines power, light weight and high sensitivity

TECHNICAL SPECIFICATIONS

Model	Length, m	Cast wt., g	Action	Packed length, m	Sections

MTVC-802XH	2.44	150	Moderate-Fast	1.33	2

ICE FISHING ROD

SHOCK ICE NEW

NAUTILUS SHOCK ICE ice fishing rods are specialist models for vertical fishing through the ice, developed to meet modern requirements, including current trends in mobile zander and pike fishing and the particular demands of perch and trout fishing.

All rods in the series are made from solid carbon and fitted with guides that reduce icing in freezing conditions. The range has two branches: 'Zander & Pike' for active mobile fishing and playing large predators, and 'Perch & Trout' for more delicate perch and trout fishing.

SHOCK ICE 'Zander & Pike' models feature a longer blank, strong fish-stopping power and a carefully tuned action. They suit deep-water zander and pike fishing in still water and current, including difficult snag-filled areas. The responsive tip provides lure control and the correct action for lipless vibration baits, jigging minnows and vertical spoons. The two-piece construction is convenient for transport, while compatibility with **NAUTILUS SHOCK ICE** reels allows a balanced outfit for confidently playing fish directly on the rod.

ZANDER & PIKE SPECIAL / ZANDER AND PIKE FISHING

PERCH & TROUT SPECIAL / TROUT AND PERCH FISHING

SHOCKICE «Perch&Trout»

The most delicate rods in the series, with a longer working blank length. Developed for trout fishing on commercial fisheries, they are also effective for perch with jigging minnows, spoons and lipless vibration baits weighing up to 18 g. The blank cushions the surges of lively fish, reduces hook pulls and allows fish to be played directly on the rod. The models come in one- and two-piece versions and feature an ergonomic EVA handle for a conventional or pistol grip.

ICE FISHING ROD

CROSSBLADE ICE - MONSTER VIB / TROUT

NEW

MONSTER VIB / FOR LARGE LURES

TROUT / TROUT FISHING

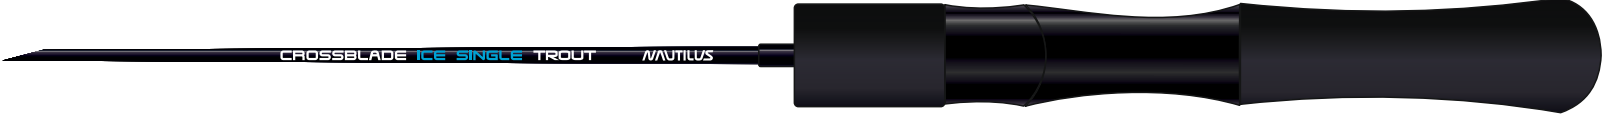

The range has been expanded in line with modern trends: using larger lures for vertical fishing, along with fluorocarbon and nylon lines, which require specific tackle characteristics so the rod's resilience can compensate for line stretch.

CROSSBLADE ICE 'Monster VIB' is designed for powerful vertical fishing with heavy lures. The reinforced, stiff blank works effectively with fluorocarbon and nylon, compensating for line stretch when setting the hook and playing fish.

The rod suits deep water, strong current and snag-filled areas. Designed for large lipless vibration baits, spoons and jigging minnows, it allows aggressive lure presentation, transmits bites to the hand and has the power reserves needed to fight specimen fish.

CROSSBLADE ICE 'TROUT' is the most delicate model for trout fishing through the ice. Its blank confidently absorbs sudden fish surges, maintaining control during the fight and reducing the chance of hook pulls.

The rod is also effective for perch, zander and pike in still water or moderate current. Its ideal application is light spoons and lipless vibration baits weighing up to 20 g.

CROSSBLADE ICE TROUT

ICE FISHING ROD

TOTAL ICE - MONSTER VIB / TROUT NEW

The range has been expanded in line with modern trends: using larger lures for vertical fishing, along with fluorocarbon and nylon lines, which require specific tackle characteristics so the rod's resilience can compensate for line stretch.

TOTAL ICE 'Monster VIB' is a powerful rod for vertical fishing with large lures on fluorocarbon and nylon. The stiff, revised blank compensates for line stretch, ensures reliable hook-sets and provides full control over the fish.

The model is designed for deep water, strong current and difficult spots, including snags. It suits large lipless vibration baits, spoons and jigging minnows, withstands aggressive lure action, clearly transmits bites and allows confident playing of large fish.

TOTAL ICE 'TROUT' is a delicate model for trout fishing on commercial fisheries. The blank cushions the sudden surges of active fish, helps control the fight and significantly reduces the risk of hook pulls. The rod also suits perch, zander and pike in still water or gentle current with light spoons and lipless vibration baits weighing up to 20 g.

ICE FISHING REEL

SHOCK ICE NEW

The **Nautilus SHOCK ICE** reel is a new, stylish, high-tech ice fishing multiplier reel designed for vertical predator fishing with any lure type: lipless vibration baits, vertical spoons and jigging minnows. It pairs perfectly with the **NAUTILUS SHOCK ICE** rod to form a balanced, functional outfit designed specifically for playing fish.

The reel provides comfortable fishing through its free-drop system, with a magnetic system controlling the lure's descent speed throughout the drop for quick coverage of any depth. **Nautilus SHOCK ICE** features a finely adjustable drag rated up to 3.5 kg for confidently fighting large fish.

The light, strong aluminium handle has ergonomic EVA knobs that feel warm to the touch, while the spacious 65 mm-diameter aluminium spool is designed for monofilament, fluorocarbon and PE braid. The reel is highly resistant to impacts and shock loads.

Size	Bearings	Gear ratio	Line capacity mm/m
600	3+1	2.7:1	0.165/95

ICE FISHING REEL

BUTLER ICE NEW

Nautilus Butler ICE is a new addition to the Butler range for 2027. This high-tech ice fishing multiplier reel offers high reliability, versatility and an affordable price. Finished in the series' signature colours, it has smooth operation and excellent winding power.

It is designed for vertical predator fishing with all types of ice fishing lures and baits (lipless vibration baits, vertical spoons, jigging minnows, sprat and others), and pairs well with any ice fishing rod designed for playing fish. The free-drop system with magnetic speed adjustment allows quick coverage of any depth, while the extended reel stem provides a comfortable grip in thick gloves.

Nautilus Butler ICE features a finely adjustable drag for fighting large fish. The light aluminium handle has EVA knobs that feel warm to the touch. The wide 60 mm-diameter aluminium spool is designed for monofilament, fluorocarbon and PE braid. **Butler ICE** is an ideal choice when reliability, low maintenance and long service life are needed at an affordable price.

Size	Bearings	Gear ratio	Line capacity mm/m
600	3+1	3.2:1	0.285/100

ICE FISHING REEL

TOTAL ICE NEW

The **Nautilus TOTAL ICE** reel is a new, affordable, high-tech revolving-spool multiplier reel for ice fishing. It is designed for vertical predator fishing with any type of ice fishing lure, including lipless vibration baits, vertical spoons and jigging minnows. The reel pairs perfectly with the **NAUTILUS TOTAL ICE** rod to form a balanced, functional outfit designed for playing fish directly on the tackle.

Maximum fishing comfort comes from the free-drop system: a magnetic system controls the lure's descent speed throughout the drop, allowing quick coverage of all fishing depths. **Nautilus TOTAL ICE** has a finely adjustable drag for confidently fighting large fish, including at considerable depths. The light, strong aluminium handle features ergonomic EVA knobs that feel warm to the touch.

The reel features a spacious 65 mm-diameter graphite spool with an optimised capacity for monofilament, fluorocarbon and PE braid.

Size	Bearings	Gear ratio	Line capacity mm/m
600	3+1	2.7:1	0.165/95
